Question: 61

Which patient is at the greatest risk for septic shock?

- A. An 84 year old woman with a long term foley catheter, a stage four pressure ulcer on her coccyx and insulin dependent diabetes.
- B. A 55 year old woman with pneumonia.
- C. A 38 year old woman with asthma and status post day 2 appendectomy.
- D. A 63 year old man who had bypass surgery two weeks ago.

Answer: A

The patient at the greatest risk for septic shock would be the 84 year old woman. She has multiple areas of entrance for bacteria.

Question: 62

Which cranial nerve is tested to assess the gag reflex?

- A. Trochlear nerve
- B. Trigeminal Nerve
- C. Vagus Nerve
- D. Glossopharyngeal Nerve

Answer: D

The cranial nerve that is tested to assess the gag reflex in a person is the Glossopharyngeal nerve. Assessment of the vagus nerve identifies the symmetry of the arch of the tongue (the “ahh” test). One would test the trigeminal nerve to assess the ability to swallow and bilateral facial sensation. Testing the trochlear nerve identifies the ability of the patient to move their eyes.

Question: 63

Mrs. C has been admitted to the hospital for exacerbation of heart failure three times in the last 14 months. What nursing action might decrease the likelihood of being readmitted so quickly?

- A. Ask the patient to see their doctor more often
- B. Allow the patient to stay in the hospital an extra 36 hours as an inpatient.

- C. Increase the diuretic dose on discharge
- D. Provide adequate patient education information about the disease and management principles and follow up with the patient within one week

Answer: D

The nursing action that might decrease the likelihood of Mrs. C being readmitted so quickly is adequate discharge information and follow-up care. Discharge care begins at admission so the more information and understanding Mrs. C has about her disease and the management of it, the more likely she will be able to appropriately take care of herself and identify the warning signs when she needs to call her doctor.

Question: 64

Which of the following scenarios reflects the greatest need for mechanical ventilation?

- A. A patient with a respiratory rate of 26 and an oxygen saturation of 89% on 1 Liter of oxygen.
- B. A patient who is visiting with visitors with an oxygen saturation level of 87%.
- C. An alert and oriented patient who is slightly diaphoretic and is having difficulty breathing.
- D. A patient who has a history of sleep apnea and continues to wake up because of missed breaths.

Answer: C

The scenario that reflects the greatest need for mechanical ventilation is the patient who is having difficulty breathing. Mechanical ventilation is appropriate when the patient's ability to oxygenate and exchange carbon dioxide is impaired.

Question: 65

Which part of the heart usually shows the signs of deterioration in heart failure?

- A. Mitral valve
- B. Left ventricular function
- C. Right ventricular function

D. Aortic valve

Answer: B

The part of the heart that typically shows the deterioration is the left ventricular function. Heart failure is disease of the ventricles of the heart, usually affecting the left ventricle before the right ventricle.

Question: 66

A patient is admitted to the intensive care unit with a diagnosis of exacerbation of heart failure. Her heart rate is 145/minute and she is breathing rapidly; her oxygen saturation is 90% on 2 L of oxygen. She has been taking beta blockers at home for her heart failure. Which medication would be the drug of choice to increase the contractility of her heart?

- A. Primacor
- B. Dopamine
- C. Digoxin
- D. Metoprolol

Answer: A

The medication that would be the drug of choice to increase the contractility of the heart when beta blockers are being used for mainstay management would be Primacor. Dopamine will not work if beta blockers are being used at home because the needed receptor sites are being used.

Killexams.com is a leading online platform specializing in high-quality certification exam preparation. Offering a robust suite of tools, including MCQs, practice tests, and advanced test engines, Killexams.com empowers candidates to excel in their certification exams. Discover the key features that make Killexams.com the go-to choice for exam success.

Exam Questions:

Killexams.com provides exam questions that are experienced in test centers. These questions are updated regularly to ensure they are up-to-date and relevant to the latest exam syllabus. By studying these questions, candidates can familiarize themselves with the content and format of the real exam.

Exam MCQs:

Killexams.com offers exam MCQs in PDF format. These questions contain a comprehensive collection of questions and answers that cover the exam topics. By using these MCQs, candidate can enhance their knowledge and improve their chances of success in the certification exam.

Practice Test:

Killexams.com provides practice test through their desktop test engine and online test engine. These practice tests simulate the real exam environment and help candidates assess their readiness for the actual exam. The practice test cover a wide range of questions and enable candidates to identify their strengths and weaknesses.

Guaranteed Success:

Killexams.com offers a success guarantee with the exam MCQs. Killexams claim that by using this materials, candidates will pass their exams on the first attempt or they will get refund for the purchase price. This guarantee provides assurance and confidence to individuals preparing for certification exam.

Updated Contents:

Killexams.com regularly updates its question bank of MCQs to ensure that they are current and reflect the latest changes in the exam syllabus. This helps candidates stay up-to-date with the exam content and increases their chances of success.
